

Writing Task

Title	Writing Task
Domain	Self-Regulation
Type	Self-report
Duration (min)	5
Description	Participants are asked to freely write on a given topic from the experimenter.
OSF Link	
Adult/Child	adult
Computerized	
Identified	1
Identified Description	Participants are asked to write for 5 minutes in response to the prompt "what happened in the last month?" The task is meant to be unconstrained and exploratory, potentially allowing the identification of behavioral features (derived from the response times of individual key presses, as well as the actual content) that are predictive of other, more traditional self-regulatory measurements of interest. The data will be analyzed using standard methods for sentiment analysis as well as advanced methods for natural language processing.
